

Genuine sense of well-being through individual choices

Comfort is not a luxury. It is essential to your health and general well-being. It's important for your body to be truly comfortable; this means that the chair you choose needs to be more than just a soft place to sit.

An ergonomically correct chair will provide continuous support and comfort and this will prevent your legs and back from becoming tired. Such a chair will relax your body, enabling your blood to circulate more freely. As your back relaxes, your spine is gently supported in the right places and at the correct angle.

1 Leather, textiles, sewing and upholstering

Our long experience in manufacturing furniture products has provided us with important knowledge on how to approach durability and comfort. Sewing, lacquering and tanning of leather and textiles, together with sewing and upholstering, function in a very demanding and important way.

2 Fjords® Active Release System™

A unique, strong wire mechanism providing the best support for the neck. If desired, it can be adjusted "from left to right" in one movement in order to optimise your sitting experience.

3 Springs in the back and seat options-as-comfort

In addition to cold cure insulated "foam in the heat and back", we also use springs that further enhance a comfort.

4 Steel back and seat design

Our main back structures are controlled and produced in a manner that satisfies our strict quality requirements.

5 Seat and back with Decorex fibres

In order to provide the back and seat elements with both a softness and improved comfort, a layer of adapted layer of Decorex fibre is inserted between the other layers and foam. Car seat masters have more or less than others in order to achieve design and comfort.

6 Gliding steel mountings

The unique gliding mechanisms that are built in to our chairs and not supersedes the best individual sitting position. Because the weight of the body determines the position.

7 Cold cure-moulded foam in back, seat, armrest and footstool

When insulating polyurethane foam, which we could use, the foam is insulated in such a way that have the exact shape of the product.

There are considerable differences between block foam and moulded cold cure foam when it comes to the durability of its technical appearance. Block foam tends to need no supplements after a few years of everyday use. This makes it softer as time passes. Our insulated cold cure foam maintains its supplements longer. Thus block insulated foam

8 Laminated wooden bases

Laminated wooden bases are selected for several of our bases because they provide durability and comfort. They give visible many racing design opportunities. To stay "in legend" and not to let the aspect of "this unique tradition out". Wood remains an important material in the development of tomorrow's furniture. All colours are claimed and demanded.

Resting position

Fjords® recliners have continuous adjustment of the back and provide comprehensive support that prevents tiredness in your legs and back. Your individual resting position is achieved by moving your body.

Two different sizes

All of our chair recliners are available in two sizes: Small and Large.

Fjords® Active Release System™

All of our recliners have a unique built-in mechanism that automatically provides the best neck and back support. If desired, it can easily be adjusted by a single movement to further enhance your坐着 experience.

Adjustable headrest

Some of our products have height adjustable headrest with the built-in Fjords® Active Release System™.

Northern Comfort™ since 1941

Fjords® Comfort zones

10 year warranty

Our material and production control provides you with a 10 year warranty on all steel components and 5 years on foam, plastic and wood constructions.

Products are traceable

All Fjords® products are traceable. A visible sticker underneath the armrest or base will tell you when the product was manufactured. In case of general enquiries on our products, we request that you refer to this sticker.
